SUMMARY

Frontend Developer with 4.6 years of experience building production React applications across fintech, healthcare and e-commerce. Lead frontend architecture for an MSME lending platform at Canopi and led a 4-person team that built a company-wide Storybook component library, cutting duplicate UI code by 40%. Focused on performance, accessibility (WCAG) and design-system consistency, with hands-on Node.js/MongoDB and LLM/RAG integration experience.

SKILLS

Core: React.js, TypeScript, JavaScript (ES6+), Redux, Context API, React Hooks, Next.js, State Management, Component Architecture
UI & Design Systems: Storybook, HTML5, CSS3, SCSS, Tailwind CSS, Material UI, Responsive Design, Accessibility (WCAG), Cross-Browser Compatibility
Performance & Data: Performance Optimization, Infinite Scroll, Pagination, REST API Integration, Error Handling, Data Visualization
Testing & Tools: Jest, Git, GitHub, Postman, Jira, CI/CD, Vercel
Backend & AI (working knowledge): Node.js, Express.js, MongoDB, JWT, OpenAI API, RAG

EXPERIENCE

Canopi India Private Limited | Sr. Software Engineer *Feb 2026 – Present | Mumbai*

- Lead frontend development and architecture for Canopi Connect, a React-based MSME lending platform where vendors register, submit business details and documents, and connect with lenders and banks for loan processing.
- Own end-to-end workflow design and frontend business logic, turning complex lending requirements into scalable user journeys: onboarding, document upload, OCR-based digitization, document verification and downstream processing.
- Designed REST API integration patterns with consistent error handling and efficient data-fetching flows, keeping the UI resilient across lending workflows.

Predigle India Pvt Ltd | Sr. Software Engineer *Jun 2022 – Jan 2026 | Chennai*

Progression: Software Engineer L1 > Software Engineer L2 > Frontend Dev Expert > Sr. Software Engineer

- Led a 4-person team building a company-wide React component library with Storybook documentation, GitHub Actions CI/CD and automated QA-to-production workflows, cutting duplicate UI code by 40% and improving design consistency, accessibility and cross-browser compatibility.
- Developed the frontend for a health analytics dashboard: multi-graph visualizations, reusable filters and a Gantt-based patient insights module with PDC scoring, using Redux data flows, performance optimizations and accessibility improvements.
- Delivered a responsive patient onboarding portal with multi-step forms, document handling, session resume and an admin progress dashboard.
- Implemented infinite scrolling with optimized API handling and pagination for Precog, improving large-data performance and responsiveness by 30%.
- Refactored legacy UI into modular reusable components, reducing development time by 25%; engineered high-performance React components that improved UI speed by 30%.
- Created an e-commerce cart and pixel-perfect React UI for digitalfactory24; led full-stack OTP authentication (React, Node.js, MongoDB) for Byonic.ai, reducing onboarding time by 25%.

PROJECTS

AutoChat AI – Multi-Tenant WhatsApp AI Support Platform *(MERN, OpenAI, RAG, WhatsApp Cloud API)*
Frontend: github.com/maheshtamarakar/autochatai | Backend: github.com/maheshtamarakar/autochatai-api

- Engineered a multi-tenant WhatsApp AI support platform (React frontend, Node.js/Express API) where businesses upload knowledge documents and serve customers using OpenAI and RAG with tenant-specific vector stores.
- Secured with JWT auth, Zod validation, rate limiting and HMAC webhook verification; covered by Jest/Supertest integration tests and deployed on Vercel.

EDUCATION

B.E. Mechanical Engineering | Terna Engineering College, Mumbai | 2018 – 2022
